

Anvil Cases ATA Rackmount and Shockmount Shipping Case

The Proven Leader in Rack-Mount Case Technology

Designed with the same precision and strength built into every Anvil case, rack-mount systems combine world-class protection with convenient access to your equipment. From basic hard-mount designs to heavy-duty shock-mount rack cases, Anvil Cases rack systems provide the convenience and added protection necessary in today's highly mobile, high-tech equipment environment.

AFX hard-mount rack cases are made from Forge II materials. They conform to the Electronic Industry Association's (E.I.A.) 19" width standard and are available in a 14" depth.

Anvil Cases ATA rack cases are available in both hard-mount and shock-mount. While a 20" depth is standard, any depth is available to accommodate your requirements. Anvil Cases ATA rack cases adhere to the E.I.A.'s 19" width standard.

Whether you're on the road or in the field, protect your fragile electronics with an Anvil rack case!

Anvil Cases pioneered rack-mount technology more than 20 years ago when musicians began touring and taking their high powered sound enhancement equipment on the road. Since then, Anvil's Research and Development Department has created several applications for rack systems. Virtually any rackable equipment or electronics can be safely transported with an Anvil Cases rack system.

Anvil Cases offers both hard-mount and shock-mount options. Hard-mount racks are positioned directly on the case interior, while shock-mount racks are designed as a case within a case and provide a 1" or 2" layer of foam between the case exterior and the inner shell.

Both front and back case lids are removable, allowing instrumentation to remain in the protective shell during use. Rack-mount systems offer you the convenience of keeping your equipment protected while in use.

Anvil Cases ATA Rackmount Case Construction Features

- Front and back clamp-on lids
- Pull-over-clamp cases - inner rack removable
- Two or more E.I.A. spaces at 20" depth
