

ANVIL Military Application Cases and Containers

CONSTRUCTION & COMPOSITION FEATURES

1. Exterior of high impact ABS plastic, fiberglass or aluminum laminant.
2. Edging-aluminum angle, conforming in gauge and overlap with case outer-wall thickness. All M.A.C.C. specified ANVIL CASES have aluminum anodized in flat black. Aluminum angle is secured with machine-driven, split-steel rivets.
3. Aluminum tongue-and-groove valance, conforming to case outer-wall thickness, provides case closure around entire perimeter of case. aluminum is flat black anodized and continuous at all 4 case corners.
4. Valance-spanning, recessed, steel spring-loaded twist latches.
5. Spring-loaded, recessed handles are accurately positioned and secured for ease at handling. Steel handles are flat-black, powder coated to conformance with applicable military specifications.
6. Full-length, steel piano hinge secures case halves and provides positive lid support. Steel hinging is flat-black powder coated in conformance with applicable military specifications.
7. Steel-knuckled, stacking or standard, ball corners protect all 8 exposed case corners. Steel ball corners are flat black, powder coated to conformance with applicable military specifications.

8. Steel corner clamps protect aluminum valance/angle joinings and are flat-black powder coated to conformance with applicable military specifications.

9. Interior latex caulking of all wood-to-wood joints maintains interior protection against water and humidity seepage.

10. Interior cushioning is minimum 2.2 pound density ester-foam or higher density ant-static or ethafoam treatments.

11. Plywood wall structure is choice of 1/4", 3/8", or 1/2" AC Grade, cross ply, multi-layer plywood conforming to all applicable military specifications.

12. Neoprene gasketing adds protection at case valance closure against water and humidity seepage.
