TUBA OR FRENCH HORN CASE

The following information will greatly aid you in ordering your new instrument case. If you provide us with the tracing and measurements requested, we will provide you with both improved service and accuracy, which will help keep your instrument looking like new.

First, lay the instrument on a flat, level surface. Using a piece of tracing paper and a pencil, trace the exact outline of the instrument, as in the sample drawing below. Be sure to keep the pencil straight up and down so as not to distort the actual shape of the instrument. Place support under the tubing so that the instrument is as level as possible.

Once you have an outline of the instrument, measure and write dimensions in for the following areas:

1) Bell Diameter

2) Dimension needed for blocking under tubing

3) Dimension from table top to top of tubing

4) (For Rotary Valves) Dimension from table top to top of valves
